Introduction

1. Introduction

1.1. General remarks

First of all, we would like to congratulate you to the purchase of a high quality DEDITEC product.

Our products are being developed by our engineers according to quality requirements of high standard. Already during design and development we take care that our products have -besides quality- a long availability and an optimal flexibility.

Modular design

The modular design of our products reduces the time and the cost of development. Therefore we can offer you high quality products at a competitive price.

Availability

Because of the modular design of our products, we have to redesign only a module instead of the whole product, in case a specific component is no longer available.

1.2. Customer satisfaction

Our philosophy: a content customer will come again. Therefore customer satisfaction is in first place for us.

If by any chance, you are not content with the performance of our product, please contact us by phone or mail immediately.

We take care of the problem.

1.3. Customer response

Our best products are co-developments together with our customers. Therefore we are thankful for comments and suggestions.

Hardware Description

2. Hardware Description

The bit pattern generator offers the opportunity to output a given bit pattern with a simple source code software. The bit pattern width is 36 bit and is able to be output by a speed up to max 200MHs to all 36 channels. In Addition, the software offers to program an arbitrary repetitive sequence to repeat bit pattern sequences.

2.1. Bit Pattern Generator

- Power supply via USB-Port (max. 500mA)
- 36 channels
- 36 Bit bit pattern width
- Sample Puffer: 512 Kbit / channel
- Repeat count: free configurable 1..65535 / unending
- Connector: 2x 20pol connector (contact spacing 2.0 mm)
- Dimensions: 117x79x24 (LxBxH in mm)
- Temperature range: 0°C until +50°C

2.2. Output Cable

As an optional accessory for the **"USB-BITP-200"** there is a specific output cable with colored and labeled wire ends (diameter ca. 0,8mm). This can be plugged on wires, socket boards or so-called micro-kleps. Micro-kleps are hook clips with a rotatable reacher and are also available at us.

Software

3. Software

3.1. Using our products

3.1.1. Access via graphical applications

We provide driverinterfaces e.g. for LabVIEW and ProfiLab. The DELIB driver library is the basis, which can be directly activated by ProfiLAB.

For LabVIEW, we provide a simple driver connection with examples!

3.1.2. Access via the DELIB driver library

In the appendix, you can find the complete function reference for the integration of our API-functions in your software. In addition we provide examples for the following programming languages:

- C
- C++
- C#
- Delphi
- VisualBasic
- VB.NET
- MS-Office

3.1.3. Access via protocol

The protocol for the activation of our products is open source. So you are able to use our products on systems without Windows or Linux.

3.1.4. Access via provided test programs

We provide simple handling test programs for the most important functions of our products. These will be installed automatically by the installation of the DELIB driver library.

So you can test directly e.g. relays or you can check the voltage of an A/D converter.

3.2. DELIB driver library

3.2.1. Overview

The following figure explains the structure of the DELIB driver library

The DELIB driver library allows an uniform response of DEDITEC hardware with particular consideration of the following viewpoints:

- Independent of operating system
- Independent of programming language
- Independent of the product

Program under diverse operating systems

The DELIB driver library allows an uniform response of our products on diverse operating systems.

We has made sure, that all of our products can be responded by a few commands.

Whatever which operating system you use. - Therefore the DELIB cares!

Program with diverse programming languages

We provide uniform commands to create own applications. This will be solved by the DELIB driver library.

You choose the programming language!

It can be simply developed applications under C++, C, Visual Basic, Delphi or LabVIEW®.

Program independent of the interface

Write your application independent of the interface !

Program an application for an USB product of us. - Also, it will work with an ethernet or RS-232 product of us !

SDK-Kit for Programmer

Integrate the DELIB in your application. On demand you receive an installation script for free, which allows you, to integrate the DELIB installation in your application.

3.2.2. Supported operating systems

Our products support the following operating systems:

- Windows 2000
- Windows XP
- Windows Vista
- Windows 7
- Linux

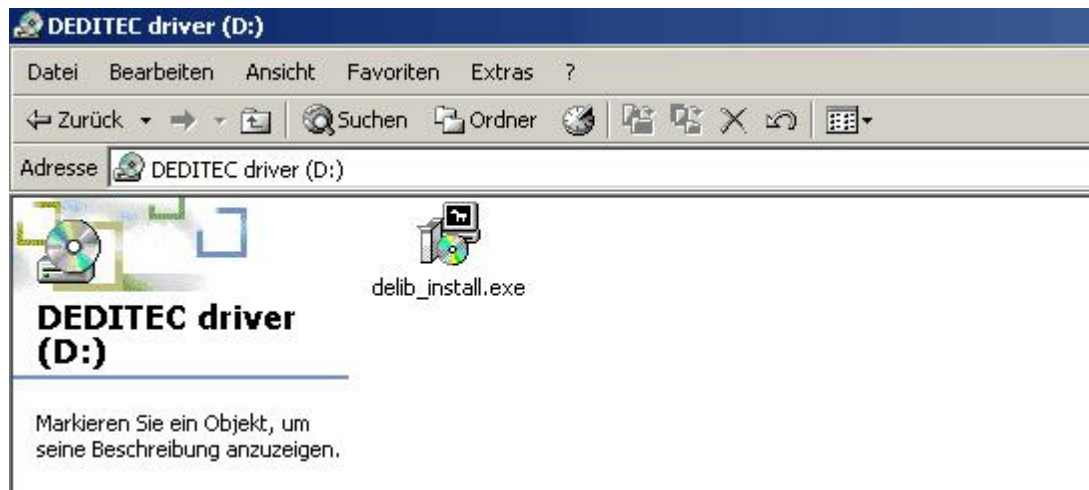

3.2.3. Supported programming languages

Our products are responsive via the following programming languages:

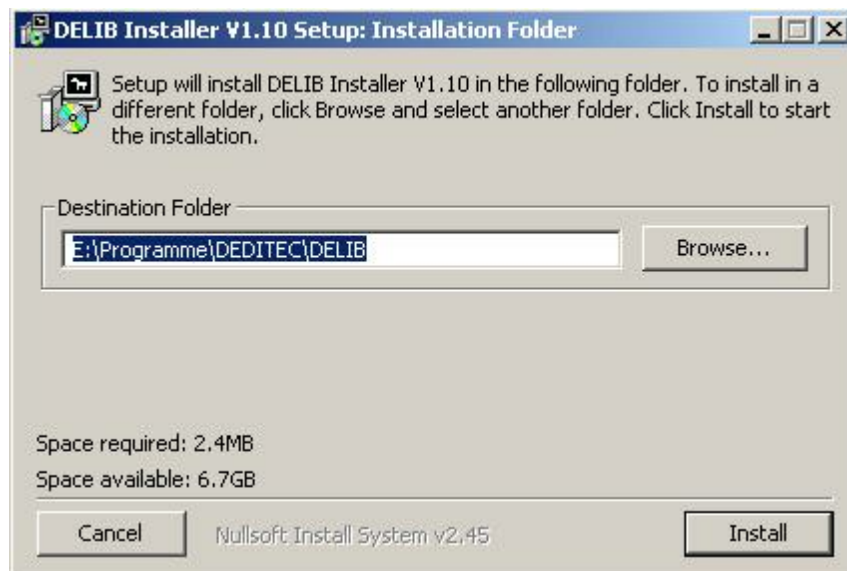

- C
- C++
- C#
- Delphi
- VisualBasic
- VB.NET
- MS-Office

3.2.4. Installation DELIB driver library

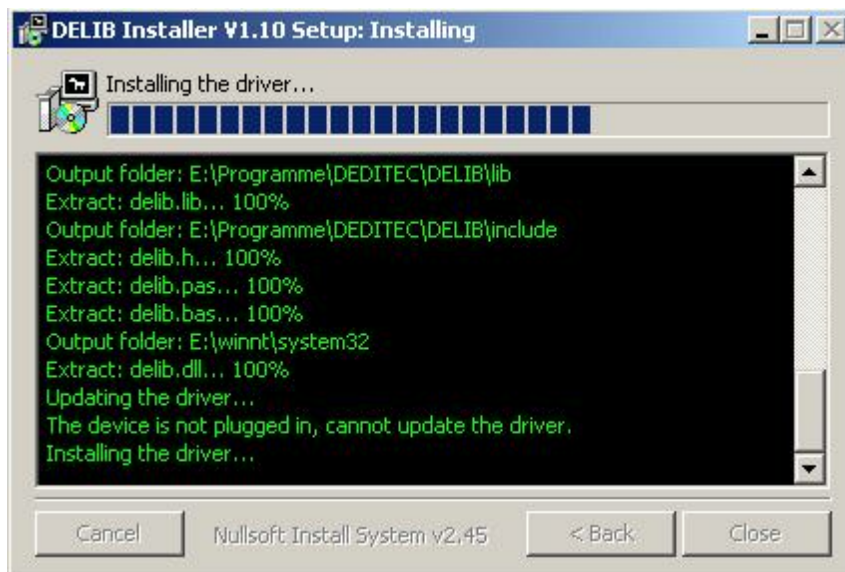

DELIB stands for DEDITEC Library and contains the necessary libraries for the modules in the programming languages C, Delphi and Visual Basic.

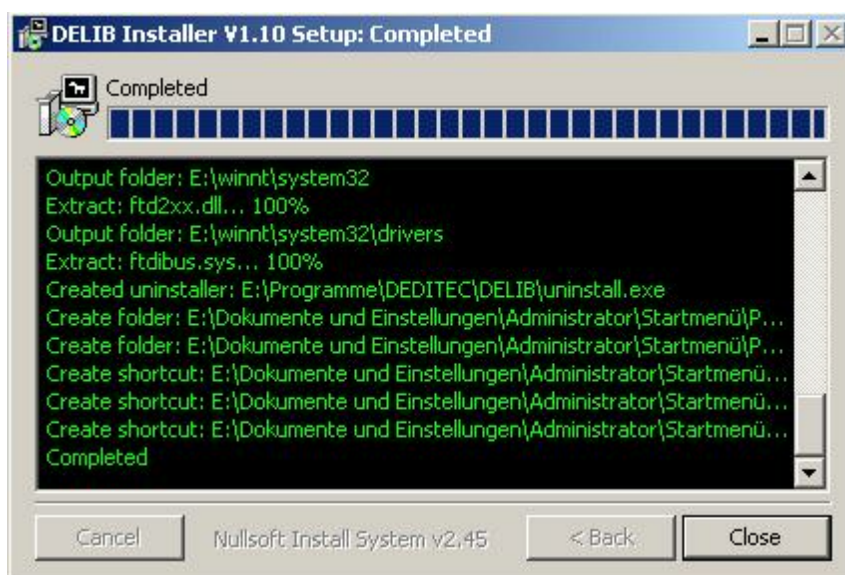

Insert the DEDITEC driver CD into the drive and start „**delib_install.exe**“. The DELIB driver library is also available on <http://www.deditec.eu/delib>

Click on „**Install**“.

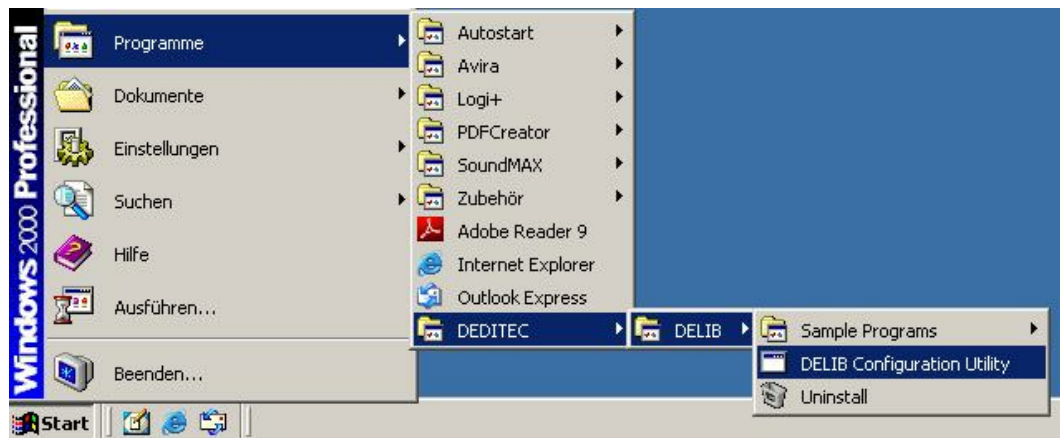

The drivers will be installed.

The DELIB driver library is now installed. Press „**Close**“ to finish the installation.

You can configure your module with the „**DELIB Configuration Utility**“ (see next chapter). This is only necessary, if more than one module is present.

3.2.5. DELIB Configuration Utility

Start the “**DELIB Configuration Utility**” as follows:

Start → Programs → DEDITEC → DELIB → DELIB Configuration Utility.

The „**DELIB Configuration Utility**“ is a program to configure and subdivide identical USB-modules in the system. This is only necessary if more than one module is present.
